SITUATION SUMMARY

2016-SREOC-24549, City of Bishop, Inyo County

A conference call with Southern Region, DWR and Inyo County was conducted today based on Inyo County's request for state assistance in the form of a consulting Hydrologist to help them form an action plan to mitigate minor, widespread flooding in the west side of Bishop.

Approximately 100 homes have saturated soils due to the water table and there is some sporadic overflow in ponds and irrigation ditches.

- Liz Bryson from the DWR Flood Operations Center and her staff asked several technical questions to get a better awareness of which DWR staff should be detailed via a mission tasking to assist the County. They indicated they should be able to provide appropriate staff.
- The County has a current drought Proclamation of Local Emergency and may amend their current proclamation to include the current emergency, pending the next meeting of the Board of Supervisors.

Power Outage, San Fernando Valley, Los Angeles County

On 06/23/16 at 1240 hours the California State Warning Center (CSWC) received a report indicating that a power outage had occurred in the San Fernando Valley in Los Angeles County.

Per Los Angeles County Department of Water and Power (LADWP):

- A crow flew into a circuit breaker, causing the breaker to blow up.
- The affected areas include Studio City, Valley Village and North Hollywood.
- Crews are moving a large remote electric transformer called a 'hog wagon' into the area to use, if needed, to help restore power.

The California Utilities Emergency Association (CUEA) is monitoring the situation and providing updates as they become available.

- As of 1900 hours on 06/23/16: Approximately 11,000 customers have been restored and 4,200 still remain without power.
- ETR for restoration is: 06/23/16 at 1900 hours.

SITUATION SUMMARY

Spill # 16-3794, Crude Oil, Ventura County

Area Impacted: Hall Canyon, Ventura, Ventura County

- At approximately 05:30 AM, a Crimson pipeline with Aera Energy crude oil ruptured at Hall Canyon in Ventura, CA. The oil leak flowed down the Prince barranca into a catch basin. The pipe has been depressurized and the oil leak has been stopped. Approximately 700 barrels or 29,400 gallons crude oil has been released from a 10" crude oil pipeline leaked at the flange, suspected to be a gasket failure.
- The oil leak stretches approximately half a mile from the point of origin to the catch basin. Crude oil is currently contained to the catch basin and no seepage has been observed at this time. The cause of the rupture is still under investigation.
- At this time, there is no threat to the ocean or other waterways.
- There are no evacuations or shelters open.
- Utility Road to Hall Canyon is closed.
- ICP transitioning from response to clean up at 1800 hours.
- ICP location will be moved. Location TBD.

WEATHER OF CONCERN

Weather of Concern

- A red flag warning is in effect this evening through late Friday night for the mountains of Los Angeles, Ventura and Santa Barbara counties.

Active Weather Warnings, Watches and Advisories by County:

http://www.wrh.noaa.gov/sto/brief/wwa_bc_cal.php

WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

A low off the Vancouver Island is on the move toward the Pacific Northwest today and will exit to the northeast Friday. Much cooler temperatures will be in place for North Ops today and Friday as a result. There is a small chance of some afternoon and evening thunderstorms along the Oregon border today, mostly in Siskiyou County. The incoming low will generate some moderate S to SW winds for areas east of the Cascade/Sierra crest today with afternoon wind speeds reaching 15-25 mph with gusts to around 35 mph and low humidity 8-14%. No high risk criteria issuance is planned for that area at this time, although conditions will approach that.

High pressure arriving right behind the low Friday will help generate some moderately strong, gusty north winds for the Sacramento Valley area in particular. Daytime wind speeds will likely reach up to 10-15 mph in some areas with gusts to around 25 mph. The western portion of the Valley will have the strongest winds. The strongest winds won't last long in most areas, however.

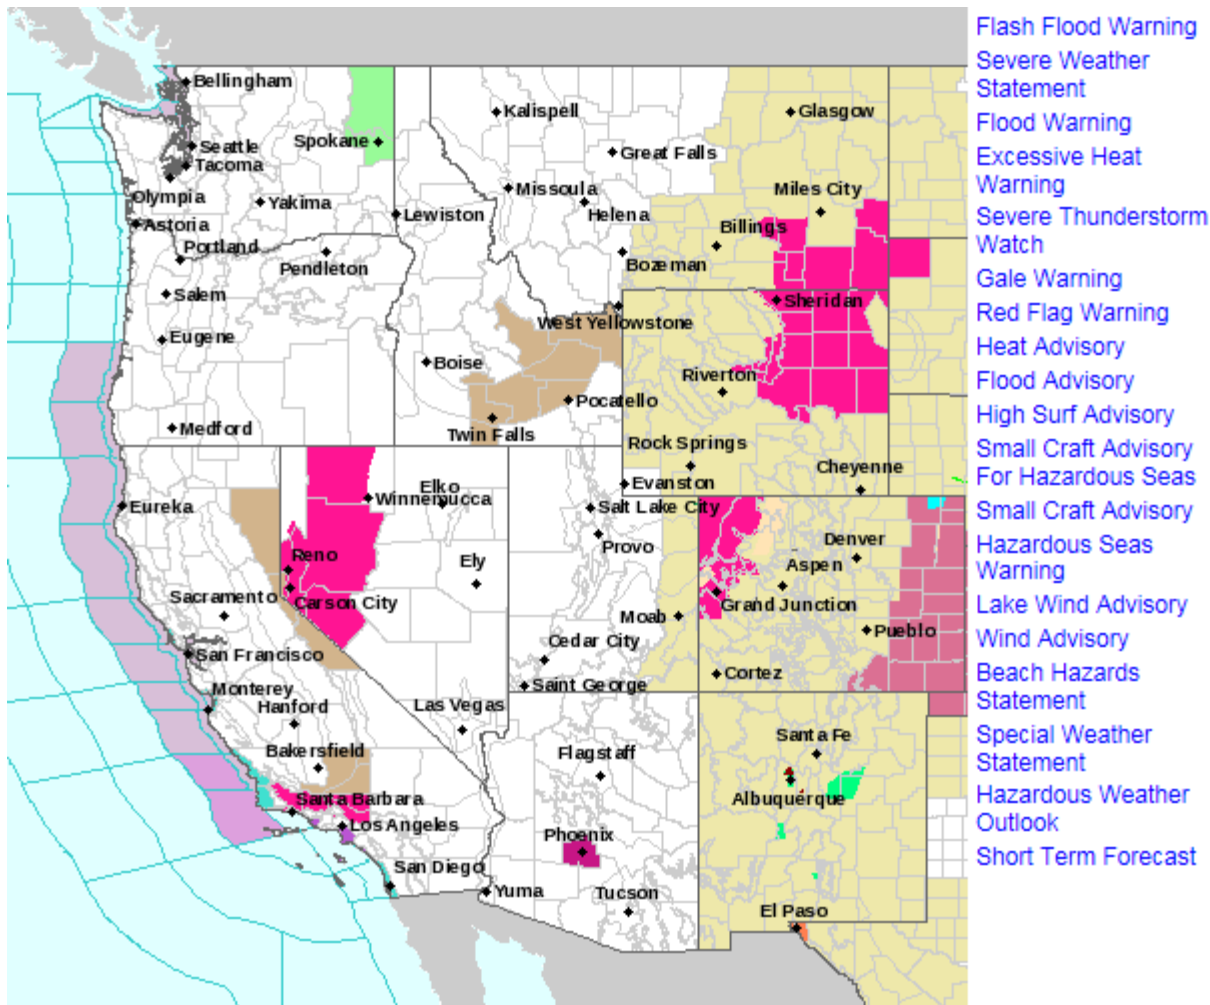

High pressure in some form will keep most of North Ops very warm and dry well into next week. Afternoon highs in the warmest inland areas will range from about 100-105 most days. Reasonably widespread afternoon min RH of 8-18% is expected. There will be many areas with poor to moderate RH recovery as well (less than 40%).

SOUTHERN CALIFORNIA

A storm system will move into the Pacific Northwest today and will be in the Northern Rockies by Friday afternoon. This storm will help lower temperatures today by a couple of degrees with daytime highs in the 90s across the inland valleys and in the 70s and 80s in the mountains. Minimum humidity this afternoon will drop into the single digits and teens across parts of the central coast as well as over most desert locations. Elsewhere humidity values will be in the 20-35% range with some teens in the mountains. It will be windy across the desert passes this afternoon and evening, especially over the Tehachapi Range where west to northwest sustained winds of 20 to 35 mph will occur. As the storm in the Pacific Northwest moves east, surface pressure gradients will turn more northerly which will set the stage for a round of strong northwest to north winds across the mountains of Santa Barbara, Ventura, and Los Angeles Counties tonight through Saturday. The strongest winds will be Friday evening into Saturday morning with speeds in the 20 to 35 mph range. These winds will be accompanied by low humidity and warm overnight low temperatures. It will be a few degrees warmer Friday and Saturday, especially over the southern half of the state. High pressure over the Desert Southwest will build westward into California Sunday and into early next week with the inland areas climbing above the century mark once again. The surface flow will become weakly onshore with light southwest to northwest winds over the area during this time. A southerly flow aloft will develop over the region during the latter half of next week which may allow for enough moisture to be transported into the area for a chance of thunderstorms over the mountains and deserts starting Wednesday.
